

Press Release

Kern and Müller to exhibit again at LogiMAT 2026

Latest products and developments on display for the first time at a combined booth

Bensheim/Kranzberg. Bensheim/Kranzberg. At this year's LogiMAT in Stuttgart, Kern and Müller will be presenting their products and developments in the packaging sector together at a combined booth for the first time. The international trade fair for intralogistics solutions and process management will be open from 24 to 26 March 2026. The largest annual intralogistics trade fair provides the ideal setting for the group of companies to present the award-winning Kern multi-format packaging system PackOnTime *2box* and the precise Müller document insertion system LogiPack.

PackOnTime perfects the automated packaging of goods in a wide variety of sizes. The packaging is individually tailored to the respective contents. This reduces material wastage to a minimum and thus meets the highest standards of sustainability and cost-effectiveness. Upholstery materials are also saved, significantly reducing transport volume. If required, the PackOnTime *2box* can process any combination of different types of goods within a single package in just a few steps and construct robust packaging that can be used for returns. Since

the system only produces packaging when it is needed, additional storage space is saved.

In terms of efficiency, the system is therefore an absolute pioneer, which has already led to several prizes and awards.

A wide variety of original samples are on display for illustrative purposes, and extensive information material and a functional model are also available.

"We look forward to presenting this smart solution in the attractive setting of LogiMAT in Stuttgart. Visit us at our booth in Hall 6 and discuss projects with us where precision, scalability and future proofing are crucial. We look forward to the exchange – challenge us!" says Thomas Frölich, Head of the kernPack Business Unit.

With LogiPack, Müller presents a high-precision document insertion system that has been specially developed for the requirements of modern intralogistics.

LogiPack enables the automatic and accurate insertion of invoices or personalized documents into shipping cartons. Thanks to its flexible configurability, it can be seamlessly integrated into existing conveyor systems and expanded as needed. With an impressive throughput of up to 2,200 cartons per hour, depending on the configuration, LogiPack ensures high processing reliability and availability.

Even before a box arrives at LogiPack, its ID is recorded and the integrated digital printer creates variable data in real time. Thanks to integrated code comparisons between the document

and the box, incorrect inserts are reliably ruled out – precision and security at the highest level.

“At LogiMAT, we will be presenting LogiPack together with LogiFeed in full performance mode – an impressive interplay of state-of-the-art intralogistics. We look forward to demonstrating our innovative systems live to a broad specialist audience,” says Josef Flörs, Director of Sales & Services at Müller Apparatebau GmbH.

Kern and Müller at LogiMAT: **Hall 6 / Booth No. 6B11**

LogiMAT offers a comprehensive overview of everything that moves the intralogistics industry, from procurement and production to delivery. International exhibitors showcase innovative technologies, products, systems and solutions for streamlining, optimizing processes and reducing costs in internal logistics processes.

About Kern:

We have a long tradition of innovation. Kern offers products, solutions and services for high-volume letter and parcel deliveries: Inserting and packaging systems as well as a professional 24/7 service.

At Kern, everything comes from a single source: from development to production, installation and commissioning on site. All segments are seamlessly linked to the traditional inserting business (*kernMail*). The mailing logistics division (*kernPack*) is also successfully staffed. The worldwide *kernService* guarantees optimum availability and productivity of the systems.

About Müller Apparatebau GmbH:

Müller stands for highly flexible processing of digital print products: automated stapling, folding, cutting, inserting and the dispensing of plastic cards in various levels of complexity. Müller paper management solutions can be individually configured from more than 100 combinable modules. We develop and produce almost all components ourselves, from mechanics and electronics to software. Our customers worldwide appreciate the flexibility of our systems.
